### COURSE OBJECTIVES:

1. To understand the basics of different electronic devices being used by Electronics Engineers.
2. To learn different Physical and mathematical concept within the operation of these electronic devices and apply this knowledge in various applications.
3. To understand operations of different opto-electronic and microwave devices and to apply this knowledge in various applications.
4. To learn the basics of Semiconductor physics.

## COURSE OUTCOMES:

**CO 1:** Student will be able to understand the fundamentals of electrical and electronic circuits and working of basic electrical instruments and electronic components.

**CO 2:** Student will be able to explain the working principle and operations of basic diode, BJT, JFET, MOSFET, different optoelectronic devices, different microwave devices etc. which are normally used in different electronic applications.

**CO 3:** Student will be able to compare, analyze and find suitable applications within the different electronic and optoelectronic devices in different fields of electronics.

**CO 4:** Student will be to develop the understanding regarding application of elementary ideas of electrical and electronics in modern technology.

### **COURSE OBJECTIVES:**

1. To understand the methods of biasing of transistors.
2. To design and analyse single stage and multistage amplifier circuits.
3. To analyse the frequency response of small signal amplifiers and design of voltage and power amplifiers using ac models of transistor.
4. To analyse and design active filters.
5. To analyse and design regulated DC power supplies.
6. To impart knowledge on oscillators, feedback amplifiers and tuned amplifiers.

## COURSE OUTCOMES:

**CO 1:** Acquire knowledge on Diode based circuits and regulated power supply.

**CO 2:** Acquire knowledge on different configurations and biasing of bipolar junction transistor (BJT) and FET and their applications.

**CO 3:** Acquire knowledge on analysis and design of transistor based voltage amplifiers, power amplifiers, feedback amplifiers, oscillators and tuned amplifiers.

**CO 4:** Acquire knowledge on operational amplifier and its applications, active filter circuits and multi-vibrators.

#### COURSE OBJECTIVES:

1. To understand the fundamental concepts and properties of signals and systems
2. To learn and analyze linear time-invariant (LTI) systems
3. To understand and transform signals using mathematical techniques
4. To apply signals and systems theory to practical applications

## COURSE OUTCOMES:

**CO1:** Students should acquire a good understanding of the fundamental concepts related to signals and systems, including continuous-time and discrete-time signals, system properties, linearity, time-invariance, causality, and stability.

**CO2:** Students should be able to design and analyze the behavior of LTI continuous-time systems, including system modeling, stability analysis, etc.

**CO3:** Students should be able to analyze signals in both time and frequency domains using appropriate mathematical techniques such as Fourier series, Fourier transform, and Laplace transform in continuous-time domain. They should also be able to apply these techniques to solve signal and system problems.

**CO4:** Students should be able to apply their knowledge of signals and systems to practical engineering applications including continuous to discrete transformation and Z-transform analysis. Students should be able to analyze and design systems in different application areas using appropriate techniques and tools.

### COURSE OBJECTIVES:

1. The syllabus will prepare the learners for Engineering Exit Examinations, ESE and campus placements.
2. Students will apply concepts of various probability distributions to find probabilities.
3. Students will make estimations for a mean, variance, standard deviation and proportions for big data.
4. Students will be eligible to work in the Data domain which is the emerging technology of the future and create more opportunities for creative work.
5. Students will be able to describe and quantify the uncertainty inherent in predictions made by machine learning models.

## **COURSE OUTCOMES:**

- CO1:** Illustrate the ideas of probability and random variables, various discrete and continuous probability distributions with their properties and their applications in physical and engineering environment that will make a bridge between elementary statistical tools and probability theory.
- CO2:** Find the inter-relation between two or more phenomena with the help of curve fitting.
- CO3:** Understand the basic components of sampling and have the knowledge on exact sampling distributions which are essential for estimating and testing hypothetical statements. Know the various sampling methodologies and their efficiencies in theoretical and practical aspects.
- CO4:** Estimate and test the parameters associated with the relevant areas for forecasting and verification of economic theory.
- CO5:** Apply the statistical tools in business, economical and commercial areas for analyzing problems and to make better decisions for future in their fields.

### Course Objectives:

**The purpose of learning this course is to:-**

1. Understand the fundamentals of data structures and algorithms.
2. Familiarize the students with basic data structures and their use in fundamental algorithms.
3. Understand and design efficient algorithms for sorting and searching.
4. Be able to solve problem statements using algorithms.

5. Apply the skills to store and interpret data using defined structures and perform various operations.

## **Course Outcomes:**

At the end of this course, students will demonstrate the ability to

**CO1:** Students will be able to acquire and remember the knowledge of fundamental data structures

**CO2:** Students will be able to understand any data structure properly and to have knowledge on basics of computer hardware and number systems.

**CO3:** Students will be able to implement any problem by writing their own algorithms

**CO4:** Students will be able to analyze the algorithm for a given problem.

**CO5:** Students will be able to use different data structures and create/update basic data files

**CO6:** Students will be able to learn various data structure approaches and techniques to develop and design projects.

## Course Objective:

Through this sessional hands-on Python programming lab, the students will be introduced the paradigm of Pyhton programming. They will learn basic concepts such as data handling, control flow, and relevant command structure for procedural and object-oriented programming. Additionally, these fundamental concepts of programming will lay the foundation for students and enable them to design solutions for real problems in the field of AI and Data Science data analysis.

**Course Outcomes:** After completion of this course students would be able to

**CO1:** Understand fundamental components of programming in python

**CO2:** Implement solutions using object orient programming concepts using python classes and objects

**CO3:** Develop databases, perform numerical computation and visualize data using python packages

**CO4:** Apply concepts of python to solve challenges in AI and Data Science.

## Syllabus:

**Module 1: Introduction to Python:** The Python Interpreter, Console I/O, Conditions, Control Flow, Functions,

**Module 2: Python Data Handling:** Datatypes, List, Tuple, Set, Dictionaries, File I/O

**Module 3: Object Oriented Programming with Python:** Classes, Objects, Special Methods:  
`__init__`, `__call__`, `__iter__`, `__getitem__`, `__len__`

**Module 4: Numerical Data Analysis with Python:** NumPy N-D arrays, Indexing, Slicing, Reshaping, ND-Array Arithmetic

**Module 5: Database Handling with Python:** Introduction to Pandas, Series, Dataframes, read CSV, read JSON

**Module 6: Data Visualization:** Introduction to Matplotlib: Pyplot, markers, lines, labels, grid, subplot, scatter, bars, histograms, pie-chart

### **Laboratory/Practical: List of Experiments:**

<b>Mod</b>	<b>Wk</b>	<b>Ques</b>	<b>Problem Statements</b>
1	1	1a	Write a program in python to calculate the area and perimeter of various polygons such as triangle, rectangles and circles.
		1b	Write a program in python to input 3 numbers separated by comma, and find the largest and smallest among them.
		1c	Write a program in python to find the roots of a quadratic equation using python.
		1d	Write a program in python to print all prime numbers inside a range of numbers provided by the user.
		1e	Write a program in python to print the mean and standard deviation of 5 scores input by the user.
2	2	2a	Write a program in python to calculate the factorial of number
		2b	Write a program in python to calculate the Fibonacci sequence till a specific no. of terms
		2c	Write a program in python to calculate the factors of number
		2d	Write a program in python to count the number of words in a string
		2e	Write a program in python to calculate the magic square based on a given number
3	3	3a	Print the series upto N terms: 1, 4, 9, 16, 25, 36...
		3b	Print the series upto N terms: 2, 4, 8, 16, 32, 64...

N=3	N=4	N=5																																					
5	5a	Input a number and check whether a given number is prime or not using functions.																																					
	5b	Input a number and check whether it is Armstrong or not using functions.																																					
	5c	Input a number and check whether it is Krishnamurthy or not using functions.																																					
	5d	Input a number and check whether the number is perfect or not using functions.																																					
	5e	Write program in python to display reverse of a number using function.																																					
2	6	6a	Write a program to Insert and Delete elements from list based on a given position																																				
		6b	Find out Mean, Median and Mode of a list of numbers.																																				
		6c	Sort a list of numbers without using a user defined function																																				
		6d	Use a dictionary to count the frequency of words in a string input by the user.																																				
		6e	Given a list of numbers return the indices in which a specific number occurs.																																				
	7	7a	Write a program to create a text file as per the path and filename provided by the user and add text as input by the user.																																				
		7b	Write a program to copy the content of a text file to another file but while copying convert all capital letters to small letters.																																				

		7c	Create a text file to append N lines such that each line displays the Fibonacci sequence upto the term corresponding to specific line number separated by ‘-’. For N = 5 the text file should read. 1 1-1 1-1-2 1-1-2-3 1-1-2-3-5
		7d	Take input four values from user with respect to number of books, pens, bags and total price as follows. 36,116,23,4649 and save it as a text file Books: 36 Pens: 116 Bags : 23 Price : Rs. 4649
		7e	Write a program to create a dictionary by reading records from the text file output in program 7d. Dictionary : {"Books":36, "Pens": 116, "Bags":23, "Price": "4649"}
		7f	Write a program to take inputs from user to create a dictionary for storing and displaying student data.
		7g	Store the dictionary data as a CSV file and write a function to display the data from the CSV file
		7h	Write a function to update or delete a specific record in student database csv file.
3	8	8a	Write a program to define a class “Box” and write functions to calculate its volume
		8b	Write a program to define a class “Car” and necessary functions to calculate the velocity given starting velocity (input), acceleration (member variable) and time of acceleration(input).
		8c	Write a program to define a class “Student”, and record the name and marks from a CSV file and display the grade card whenever the object is called as a function using call () .
		8d	Write a program to define a class “Loan” with member variables as principle, rate of interest and duration. Write a function to output the maturity amount.
		8e	Create a class that will return the Fibonacci numbers sequentially every time it is called using iter ()
		8f	Create a class “Data” that can store data points scattered in a 2-dimensional space and belonging to three different categories. Write a function to find the centroid of each category.
4	9	9a	Write a program to take input and display the values of 2 dimensional NumPy array
		9b	Write a program to add two 2-dimensional NumPy arrays
		9c	Write a program to transpose a 2-dimensional NumPy array
		9d	Write a program to reshape a 2-dimensional NumPy array.
		9e	Write a program to find the dot-product and matrix-product of two NumPy arrays.
		9f	Write a program to find the inverse of a NumPy matrix
		9g	Write a program to calculate the Eigen value and Eigen vectors of NumPy array
		9h	Write a program to find the determinant of NumPy matrix
		9i	Write a program using numpy to solve a system of linear equations
		9j	Write a program using numpy to perform singular value decomposition of a matrix.

<b>5</b>	<b>10</b>	10a	Read a CSV file as a pandas dataframe
		10b	Fetch rows from the dataframe based on a specific attribute
		10c	Display the value of specific columns of a pandas dataframe
		10d	Find the mean and standard deviation of a specific column containing numeric data.
		10e	Save the dataframe as a JSON file
		10f	Use pandas and yfinance to read a stock market data as a series.
<b>6</b>	<b>11</b>	11a	Write a program using matplotlib to display a line plot
		11b	Write a program using matplotlib to display a scatter plot
		11c	Write a program using matplotlib to display sine wave with frequency and amplitude input by the user
		11d	Write a program to display bar-plot and histogram.
		11e	Display 4 plots as 2x2 grid using the subplot function
		11f	Write a program to plot the stock prices as computed in Ques. No. 10f.
