COURSE OBJECTIVES:

1. To understand the basics of different electronic devices being used by Electronics Engineers.
2. To learn different Physical and mathematical concept within the operation of these electronic devices and apply this knowledge in various applications.
3. To understand operations of different opto-electronic and microwave devices and to apply this knowledge in various applications.
4. To learn the basics of Semiconductor physics.

COURSE OUTCOMES:

CO 1: Student will be able to understand the fundamentals of electrical and electronic circuits and working of basic electrical instruments and electronic components.

CO 2: Student will be able to explain the working principle and operations of basic diode, BJT, JFET, MOSFET, different optoelectronic devices, different microwave devices etc. which are normally used in different electronic applications.

CO 3: Student will be able to compare, analyze and find suitable applications within the different electronic and optoelectronic devices in different fields of electronics.

CO 4: Student will be to develop the understanding regarding application of elementary ideas of electrical and electronics in modern technology.

1	Semiconductor Electronics and Statistics	Fermi-Dirac Statistics, Fermi and Quasi-Fermi Level, Drift and Diffusion, Conductivity and mobility, Density of states and carrier concentration, Generation and recombination of carriers, Semiconductor equations, Poisson and Continuity equations, Hall effect, IC fabrication (Elementary discussion of different steps)	International Academia: (https://ocw.mit.edu/courses/6-012-microelectronic-devices-and-circuits-fall-2009/pages/lecture-notes/) AICTE-prescribed syllabus: (https://www.aicte-india.org/sites/default/files/Model_Curriculum/Final_ECE.pdf) Industry Mapping: SPICE software	5	1. Introduction to programming using P-SPICE
2.a	Junctions and Contacts	p-n junction:- operation and energy band diagram, junction capacitance and frequency limitation; Zener diode and breakdowns, Heterojunction:- operation and band	International Standards :(https://ocw.mit.edu/courses/6-012-microelectronic-devices-and-circuits-fall-2009/pages/lecture-notes/)	5	1. Design Forward biased PN diode and find its V-I characteristics using LT Spice simulator.

		diagram, Ohmic and Schottky contacts.	AICTE prescribed syllabus: (https://www.aicte-india.org/sites/default/files/Model_Curriculum/Final_ECE.pdf) Industry Mapping: SPICE software		2. Design Reverse biased Zener diode and find its V-I characteristics using LT Spice simulator.
2.b	Bipolar junction transistors (BJT)	Construction, operation and band diagram, BJT configurations, load line and Q-point, Amplification, Leakage currents, Early effect, Ebers-Moll equivalent circuit model, frequency limitation.	International Standards : (https://ocw.mit.edu/courses/6-012-microelectronic-devices-and-circuits-fall-2009/pages/lecture-notes/) AICTE prescribed syllabus: (https://www.aicte-india.org/sites/default/files/Model_Curriculum/Final_ECE.pdf) Industry Mapping: SPICE software	6	1. Design the circuit using LT SPICE to draw the output characteristics of BJT in common-emitter configuration for different base ($I_b=10\mu A, 20\mu A$) current. 2. Design the circuit using LT SPICE to draw input characteristics of BJT in common-emitter configuration for two different values of collector to emitter voltages ($V_{ce}=4V$ and $10V$). 3. Design an Amplifier circuit using LT SPICE and find the

					gain of it.
3	Field effect transistors:	JFET:- structure, operation and Pinch-off voltage; MOSFET :- structure and operation of concept of accumulation, depletion and inversion with band bending, Threshold voltage: expression and dependencies, drain current equation in terms of W/L (no derivation), drain current characteristics, small signal model, C-V characteristic of ideal MOS capacitor, channel length modulation, MOS scaling and short channel effects (brief introduction), Substrate bias effect, CMOS working principle and switching, frequency limitations; FinFET: structure, design challenges, applications. COURSE OBJECTIVES:

1. To understand the methods of biasing of transistors.
2. To design and analyse single stage and multistage amplifier circuits.
3. To analyse the frequency response of small signal amplifiers and design of voltage and power amplifiers using ac models of transistor.
4. To analyse and design active filters.
5. To analyse and design regulated DC power supplies.
6. To impart knowledge on oscillators, feedback amplifiers and tuned amplifiers.

COURSE OUTCOMES:

CO 1: Acquire knowledge on Diode based circuits and regulated power supply.

CO 2: Acquire knowledge on different configurations and biasing of bipolar junction transistor (BJT) and FET and their applications.

CO 3: Acquire knowledge on analysis and design of transistor based voltage amplifiers, power amplifiers, feedback amplifiers, oscillators and tuned amplifiers.

CO 4: Acquire knowledge on operational amplifier and its applications, active filter circuits and multi-vibrators.

COURSE OBJECTIVES:

1. To understand the fundamental concepts and properties of signals and systems
2. To learn and analyze linear time-invariant (LTI) systems
3. To understand and transform signals using mathematical techniques
4. To apply signals and systems theory to practical applications

COURSE OUTCOMES:

CO1: Students should acquire a good understanding of the fundamental concepts related to signals and systems, including continuous-time and discrete-time signals, system properties, linearity, time-invariance, causality, and stability.

CO2: Students should be able to design and analyze the behavior of LTI continuous-time systems, including system modeling, stability analysis, etc.

CO3: Students should be able to analyze signals in both time and frequency domains using appropriate mathematical techniques such as Fourier series, Fourier transform, and Laplace transform in continuous-time domain. They should also be able to apply these techniques to solve signal and system problems.

CO4: Students should be able to apply their knowledge of signals and systems to practical engineering applications including continuous to discrete transformation and Z-transform analysis. Students should be able to analyze and design systems in different application areas using appropriate techniques and tools.

COURSE OBJECTIVES:

1. The syllabus will prepare the learners for Engineering Exit Examinations, ESE and campus placements.
2. Students will apply concepts of various probability distributions to find probabilities.
3. Students will make estimations for a mean, variance, standard deviation and proportions for big data.
4. Students will be eligible to work in the Data domain which is the emerging technology of the future and create more opportunities for creative work.
5. Students will be able to describe and quantify the uncertainty inherent in predictions made by machine learning models.

COURSE OUTCOMES:

- CO1:** Illustrate the ideas of probability and random variables, various discrete and continuous probability distributions with their properties and their applications in physical and engineering environment that will make a bridge between elementary statistical tools and probability theory.
- CO2:** Find the inter-relation between two or more phenomena with the help of curve fitting.
- CO3:** Understand the basic components of sampling and have the knowledge on exact sampling distributions which are essential for estimating and testing hypothetical statements. Know the various sampling methodologies and their efficiencies in theoretical and practical aspects.
- CO4:** Estimate and test the parameters associated with the relevant areas for forecasting and verification of economic theory.
- CO5:** Apply the statistical tools in business, economical and commercial areas for analyzing problems and to make better decisions for future in their fields.

COURSE OBJECTIVES:

1. To learn about different types of network theorem and to apply this knowledge in circuit analysis.
2. To learn about transient response of a circuit.
3. To understand the application of Laplace transform and graph theory in circuits.
4. To learn about the resonating nature of a circuit.
5. To learn the two pot parameters and their applications in circuit

COURSE OUTCOMES:

CO1: After completing this course, the students will be able to analyze a circuit with respect to node voltages and currents.

CO2: They will be able to understand the transient and steady state response of the circuit.

CO3: They will be able to analyze resonating and coupled circuits.

CO4: They will be able to analyze simple two-port circuit and analyze circuits using Graph Theory.

Course Objectives:

The purpose of learning this course is to:-

1. Understand the fundamentals of data structures and algorithms.
2. Familiarize the students with basic data structures and their use in fundamental algorithms.
3. Understand and design efficient algorithms for sorting and searching.
4. Be able to solve problem statements using algorithms.

5. Apply the skills to store and interpret data using defined structures and perform various operations.

Course Outcomes:

At the end of this course, students will demonstrate the ability to

CO1: Students will be able to acquire and remember the knowledge of fundamental data structures

CO2: Students will be able to understand any data structure properly and to have knowledge on basics of computer hardware and number systems.

CO3: Students will be able to implement any problem by writing their own algorithms

CO4: Students will be able to analyze the algorithm for a given problem.

CO5: Students will be able to use different data structures and create/update basic data files

CO6: Students will be able to learn various data structure approaches and techniques to develop and design projects.

Subject Name : Constitution of India	Semester : III
L-T-P : Presentation, Chalk and duster, brainstorming, minor projects (Assignments).	Credit : 0
Pre-Requisites : Fundamental knowledge of humanities & social science subjects (civics) till class 10 th standard.	

COURSE OBJECTIVE:

1. Understand fundamental principles of the Constitution of India.
2. Analyze constitutional provisions and landmark judgments.
3. To understand observe the judiciary system and law-making system of India
4. To know about one's rights and duties as a citizen of India

COURSE OUTCOME:

CO1	Students will be able to recall and understand the fundamental concepts and provisions of the Constitution of India, including its historical background, preamble, fundamental rights, directive principles of state policy, and fundamental duties.
CO2	Students will demonstrate an understanding of the key principles and features of the Indian Constitution, including the separation of powers, federal structure, and the roles and responsibilities of different constitutional bodies and institutions.
CO3	Students will be able to apply their knowledge of the Constitution of India to analyze and interpret real-life scenarios, legal cases, and contemporary issues, evaluating how constitutional provisions impact various aspects of governance and society.
CO4	Students will critically analyze and assess the constitutional amendments and their implications on the socio-political landscape of India, evaluating the intent and impact of these changes.
CO5	Students will be able to synthesize information from various constitutional provisions and legal sources to construct well-reasoned arguments and present their views on constitutional matters and legal debates.
CO6	Students will be capable of evaluating the effectiveness and efficiency of the Indian Constitution in promoting justice, equality, and the rule of law, as well as identifying its strengths and weaknesses compared to other constitutional frameworks worldwide.

Course Content:

Module 1: The Constitution - Introduction

- The History of the Making of the Indian Constitution
- Preamble and the Basic Structure, and its interpretation
- Fundamental Rights and Duties and their interpretation
- State Policy Principles

Module 2: Union Government & State Government

- Structure of the Indian Union
- President — Role and Power
- Prime Minister and Council of Ministers Lok Sabha and Rajya Sabha
- Governor - Role and Power
- Chief Minister and Council of Ministers
- State Secretariat

Module 3: Judiciary

- **Supreme court:** Organization of supreme court, procedure of the court, independence of the court, jurisdiction and power of supreme court.
- **High court:** Organization of high court, procedure of the court, independence of the court, jurisdiction and power of supreme court.
- **Subordinate courts:** constitutional provision, structure and jurisdiction.
- **Public interest litigation (PIL):** meaning of PIL, features of PIL, scope of PIL, principle of PIL, guidelines for admitting PIL.

Module 4: Local Administration

- District Administration
- Municipal Corporation
- Zila Panchayat

Module 5: Election Commission

- Role and Functioning
- Chief Election Commissioner
- State Election Commission

					○ Apply quadratic equations to solve real-world problems, such as finding the dimensions of a rectangle given its area and perimeter, or determining the trajectory of a projectile. • Quadratic Functions and Graphs: ○ Graph quadratic functions and interpret the graph to find the vertex, axis of symmetry, and intercepts. ○ Use the graph to solve quadratic equations and inequalities.
2	Logical Reasoning	Textbook: Verbal and Non-Verbal reasoning Author: R.S Agarwal Publishing House: S. Chand - Puzzle - Classification Based Puzzle - Sequential Based Puzzle - Selection Based Puzzle - Ranking Based Puzzle - Blood Relation Based Puzzle - Inequality	National Exams: 1.UPSC Civil Services Exam (https://upsc.gov.in/sites/default/files/Notif-CSP-23-engl-010223.pdf), pg 25-26 2. UPSC Combined Defence Services (https://upsc.gov.in/sites/default/files/Notif-CDS-I-Exam-2023-Engl-211222.pdf), pg 20-21 3.
