List of Professional Electives for Elective-II

- A. Refrigeration and Air Conditioning
- B. Additive Manufacturing
- C. Turbo Machinery
- D. Finite Element Analysis
- E. Tribology
- F. Composite Materials
- G. Design for Manufacturing & Assembly

University of Engineering and Management
Institute of Engineering & Management, Salt Lake Campus
Institute of Engineering & Management, New Town Campus
University of Engineering & Management, Jaipur
Syllabus for B. Tech Admission Batch 2023-2027

Subject Name: Computer Aided Design & Analysis

Subject Code: PCCME601 Credit: 2

Lecture Hours: 24

Pre-Requisites: Machine Element & System Design, Mathematics

Relevant Links: [STUDY MATERIAL](#)

[COURSERA](#)

Objectives:

1. To understand the role of computer-based tools in the design, analysis, and manufacturing processes.
2. To develop a thorough understanding of geometric transformations and their applications in 2D and 3D modeling.
3. To gain proficiency in creating, representing, and modifying curves and surfaces using computer-aided tools.
4. To acquire knowledge of solid modeling techniques and standards for model exchange between software platforms.
5. To apply finite element analysis and optimization techniques to solve engineering problems using popular CAE software.

Contents

Module number	Topic	Sub-topics	Mapping with Industry and International Academia	Textbook & Chapter No.	Lecture Hours	Corresponding Lab Assignment
Module I	Introduction	Role of computers in design process; Computer aided design, analysis and manufacturing; Computer integrated manufacturing; Popular CAD software used in industry	<p>National Standard: https://www.aicte-india.org/sites/default/files/Model_Curriculum/Final_Mechanical%20Engg.pdf</p> <p>International Standard https://ocw.mit.edu/courses/mechanical-engineering/2-158j-computational-geometry-spring-2003/</p> <p>Industry Mapping: AUTO-CAD, SOLIDWORKS</p>	P.N. Rao, "CAD/CAM Principles and Applications," Chapter 1	2	1. Implement and apply 2D transformation matrices (translation, scaling, rotation) on a set of points, and visualize both original and transformed shapes. 2. Generate and use equation-driven curves in SolidWorks for designing machine elements like sinusoidal or parabolic cams.
Module II	Transformations	Matrix representation of points, lines and planes; 2D transformation for translation, scaling, rotation and reflection; Homogeneous representation & concatenation; 3D transformations.	<p>National Standard: https://www.aicte-india.org/sites/default/files/Model_Curriculum/Final_Mechanical%20Engg.pdf</p> <p>International Standard https://ocw.mit.edu/courses/mechanical-engineering/2-158j-computational-geometry-spring-2003/</p> <p>Industry Mapping: MATLAB</p>	P.N. Rao, "CAD/CAM Principles and Applications," Chapter 3	4	3. Model and simulate robotic arm motion using a cubic Bezier curve in MATLAB-SIMULINK, visualize the trajectory, and compare it with a linear path.
Module III	Curves and Surfaces	Representation of curves; Hermite curves, Bezier curves, Bspline curves,	<p>National Standard: https://www.aicte-</p>	P.N. Rao, "CAD/CAM Principles and	6	4. Create a 3D object

		Rational curves; Surface modelling – parametric representation, planar surface, surface of revolution, Coons and bicubic patches, Bezier and B-spline surfaces.	india.org/sites/default/files/Model_Curriculum/Final_Mechanical%20Engg.pdf International Standard https://ocw.mit.edu/courses/mechanical-engineering/2-158j-computational-geometry-spring-2003/ Industry Mapping: AUTO-CAD, SOLIDWORKS	Applications, ” Chapter 4		in SolidWorks, export it as IGES or STL, and import it into a CAE tool. 5. Perform FEA in ANSYS to simulate stress and deformation of a bar element under load, and analyze the dynamic results.
Module IV	Solid Modelling	Solid modelling techniques – sweep (linear and curved), Boolean (constructive solid geometry) and other techniques; Solid model representation (Boundary and Constructive Solid Geometry); Medical modelling (pixels, scans and voxels); Exchange standards (IGES, DXF, STEP, STL etc.).	National Standard: https://www.aicte-india.org/sites/default/files/Model_Curriculum/Final_Mechanical%20Engg.pdf International Standard https://ocw.mit.edu/courses/mechanical-engineering/2-158j-computational-geometry-spring-2003/ Industry Mapping: AUTO-CAD, SOLIDWORKS	P.N. Rao, “CAD/CAM Principles and Applications, ” Chapter 4	4	6. Determine the theoretical stress-concentration factor (Kt) for a notched specimen using ANSYS Mechanical. 7. Develop a basic 2D beam model in STAAD.Pro, apply boundary conditions and loads, and analyze displacement and stress distribution using FEA.
Module V	Engineering Analysis	Introduction to finite element method; Principle of potential energy; FE analysis of 1D element problems (spring, bar, truss elements); Development	National Standard: https://www.aicte-india.org/sites/default/files/Model_Curriculum/Final_Mechanical%20Engg.pdf	David Hutton, “Fundamentals of Finite Element Analysis” Chapter 1, 2	8	8. Optimize a design using AI based

		of element stiffness equation and their assembly; Plain strain and plain stress problems	<p>International Standard https://ocw.mit.edu/courses/mechanical-engineering/2-158j-computational-geometry-spring-2003/</p> <p>Industry Mapping: ANSYS</p>			Topology Optimization tool of SolidWorks

University of Engineering & Management, Jaipur
Syllabus for B. Tech Admission Batch 2023-2027

Course Outcomes:

At the end of this course students will demonstrate the ability to

- 1) Demonstrate the ability to create 2D and 3D models using CAD tools and apply geometric transformations for design manipulation.
- 2) Develop and analyze parametric curves and surfaces to model complex engineering geometries.
- 3) Perform solid modeling and effectively utilize Boolean operations to construct advanced shapes in CAD software.
- 4) Conduct finite element analysis in CAE software for practical engineering applications and validate the results.

Create a rough sketch of the design, list key materials, and propose a simple assembly plan.

		components supply chain; Manufacturing & assembly plan; Product testing & quality assurance; Intellectual property rights management.	Industry Mapping: SolidWorks, MATLAB. MS-Excel			
3	Marketing & Finance	Market segmentation & market sizing; Customer persona & value proposition; Marketing (Go-to-market) strategy; Distribution channels and sales network; Funding requirement (based on stage); Source of funding for startup ventures; Financial projections and accounting; Startup to scale up financing.	<p>AICTE prescribed syllabus - https://www.aicte-india.org/sites/default/files/ModelCurriculum/Final_Mechanical%20Engg.pdf</p> <p>International Standard - https://ocw.mit.edu/courses/15-351-managing-innovation-and-entrepreneurship-spring-2008/</p> <p>Industry Mapping: MATLAB. MS-Excel, Hubspot</p>	Innovation Management and New Product Development Paul Trott Chapter 16	7	Choose a product idea, define target market segments, and create a customer persona. Outline a basic go-to-market strategy, identify distribution channels, and estimate initial funding needs.
4	Venture Creation	Sustainable business options & pathways; Business model & business canvas; Startup team & business partners; Startup ecosystem and stakeholders; Technology business incubators & parks; Proposal pitching	<p>AICTE prescribed syllabus - https://www.aicte-india.org/sites/default/files/ModelCurriculum/Final_Mechanical%20Engg.pdf</p> <p>International Standard - https://ocw.mit.edu/courses/15-351-managing-innovation-and-entrepreneurship-spring-2008/</p>	New Venture Creation: Jeffrey A Timmons and Stephen Spinelli Chapter 2	7	Define a sustainable business idea, outline its business model using a simple canvas, and identify key partners and stakeholders.

		& agreements; Startup company incorporation; Social impact & responsibility.	entrepreneurship-spring-2008/ Industry Mapping: B-Plans. MS-Excel			
5	Course Project	Need identification, innovative solution, business plan, go-to-market strategy.	<p>AICTE prescribed syllabus - https://www.aicte-india.org/sites/default/files/Model_Curriculum/Final_Mechanical%20Engg.pdf</p> <p>International Standard - https://ocw.mit.edu/courses/15-351-managing-innovation-and-entrepreneurship-spring-2008/ Industry Mapping: MATLAB. MS-Excel,</p>	Innovation Management and New Product Development Paul Trott Chapter 12	7	Identify customer needs and rank them in an Excel sheet. Design an innovative solution with estimated costs. Create a basic financial plan with cost and revenue projections. Outline a simple go-to-market strategy (sales channels, target segments). Based on all develop a product.

Course Outcomes:

At the end of this course students will demonstrate the ability to

1. Identify opportunities, foster innovation, and build core competencies for growth.
2. Manage ideation, prototyping, testing, and market readiness.
3. Develop entry, engagement, and commercialization approaches.
4. Plan finances, secure funding, and create sustainable business models.

Module number	Topic	Sub-topics	Mapping with Industry and International Academia	Text Book & Chapter	Lecture Hours	Corresponding Lab Assignment
1	Overview of Project Management	Project Definition: Project study techniques: Project management features; Management information and control systems for projects; Project organization design: Plant location analysis models;	<p>IIT Syllabus https://www.ieor.iitb.ac.in/ac/ad/courses/ie705</p> <p>International Standard - https://ocw.mit.edu/courses/1-011-project-evaluation-spring-2011/</p> <p>Industry Mapping: MS excel, MS project</p>	<p>K Nagarajan, Project Management, Chapter 1 R.</p> <p>Panneerselvam, P Senthilkumar, Project Management, Chapter 1</p>	3	<p>1. Using MATLAB, simulate a project planning and monitoring framework for a developmental project, focusing on stakeholder analysis and key project phases (planning, execution, and closure).</p>
2	Project Lifecycle	Project Design, Project Planning and Scheduling, Project Monitoring, Control, Analysis and Appraisal and Closure & Dissemination. emphasis would be on developmental projects while drawing heavily from the advances in the field of 'Business Project Management'. Framework for conceiving, planning, executing and closing projects; Project views of the stakeholders.	<p>IIT Syllabus https://www.ieor.iitb.ac.in/ac/ad/courses/ie705</p> <p>International Standard - https://ocw.mit.edu/courses/1-040-project-management-spring-2004/</p> <p>Industry Mapping: MATLAB, OpenProject, MS project</p>	<p>Panneerselvam, P Senthilkumar, Project Management, Chapter 2</p>	5	<p>2. Complement this with MS Project to create a detailed Gantt chart and resource allocation for the same project, ensuring alignment with Business Project Management principles.</p> <p>3. Social Cost Benefit Analysis, and the 'OpenProj' or 'Open Workbench'</p>

3	Anatomy of projects	Objectives and success criteria- both financial and non-financial measures; Project evaluation and selection methods using multiple attributes -economic and operation analysis; Decision tree, AHP and Utility theory.	IIT Syllabus https://www.ieor.iitb.ac.in/ac/ad/courses/ie705 International Standard - https://ocw.mit.edu/courses/1-040-project-management-spring-2004/ Industry Mapping: MS Project	K Nagarajan, Project Management, Chapter 3 Panneerselvam, P Senthilkumar, Project Management, Chapter 14	5	software tool will be introduced for project scheduling and management. 4. Develop a comprehensive framework for evaluating project anatomy, incorporating objectives, financial/non-
4	Scheduling Optimization	Concepts and applications of Work Breakdown Structure (WBS), Project scheduling; Network analysis for time management (Gantt charts, PERT, CPM, RAMPS, multi-project control; Project cost optimization time cost Trade off: Crashing and Simulation);	IIT Syllabus https://www.ieor.iitb.ac.in/ac/ad/courses/ie705 International Standard - https://ocw.mit.edu/courses/1-040-project-management-spring-2004/ https://ocw.mit.edu/courses/e-sd-36-system-project-management-fall-2012/pages/syllabus/ Industry Mapping: Microsoft Project, Open Workbench, excel,	K Nagarajan, Project Management, Chapter 8 Sitagshu Khatua, Project Management and Appraisal Chapter 5 Panneerselvam, P Senthilkumar, Project Management, Chapter 17&18	6	financial success criteria, and selection methodologies such as economic analysis, decision trees, AHP, and utility theory using MS project. 5. Create a detailed Work Breakdown Structure (WBS) and project schedule using Microsoft Project to manage a hypothetical project effectively.

5	Project Resource Management :	Allocation, Leveling and Smoothing methods; Multi project and multi resource, multi-mode scheduling under various constraints- limited resources, limited budget, non-split, start / end lag; Application of Heuristics, Mathematical programming, Evolutionary algorithms such as GA, Application of knowledge-based systems.	<p>IIT Syllabus https://www.ieor.iitb.ac.in/ac/ad/courses/ie705</p> <p>International Standard - https://ocw.mit.edu/courses/1-040-project-management-spring-2004/</p> <p>Industry Mapping: OpenProject, MATLAB</p>	Panneerselvam, P Senthilkumar, Project Management, Chapter 20 &21	6	6. Analyze project scheduling and optimize time-cost trade-offs using techniques like CPM, PERT, and crashing in Microsoft Project.
6	Managing Project Risks	Decision making theories in management under certainty, Application of the methodologies and formation in project decision making problem solutions: risk, uncertainty and competitive situations; Identification, Assessment and Mitigation.	<p>IIT Syllabus https://www.ieor.iitb.ac.in/ac/ad/courses/ie705</p> <p>International Standard - https://ocw.mit.edu/courses/1-040-project-management-spring-2004/</p> <p>https://ocw.mit.edu/courses/e-sd-36-system-project-management-fall-2012/pages/syllabus/</p> <p>Industry Mapping: MS project</p>	Panneerselvam, P Senthilkumar, Project Management, Chapter 2 K Nagarajan, Project Management, Chapter 3	5	

7	Earned value concept in project control	Calculation of Schedule and Cost Variances; Managing Human resources, conflicts, quality, reliability, IT and Life cycle costs in projects. Project capital, cost estimation: Breakeven analysis, Cost-benefit analysis: Profitability analysis, commercial and notional profitability; Management and human factor analysis,	<p>IIT Syllabus https://www.ieor.iitb.ac.in/ac/ad/courses/ie705</p> <p>International Standard - https://ocw.mit.edu/courses/1-040-project-management-spring-2004/</p> <p>Industry Mapping: MS Project</p>	K Nagarajan, Project Management, Chapter 3 &4 Panneerselvam, P Senthilkumar, Project Management, Chapter 5 &6	6	
---	--	---	--	---	---	--

Course Outcomes

1. Students will understand project management frameworks, focusing on design, planning, scheduling, and closure for developmental projects.
2. Students will master project scheduling techniques and resource management methods under various constraints.
3. Students will apply evaluation and decision-making tools like AHP, Decision Trees, and Utility Theory in project selection.
4. Students will manage project risks, costs, and control using earned value concepts, cost estimation, and profitability analysis.

Course Outcomes

1. EXPLAIN and APPLY principles of cost estimation and financial analysis, including fixed and variable costs, life cycle costing, improvement models, and learning curves.
2. ANALYZE economic and financial indicators such as inflation, deflation, economic criteria, present worth, and cash flow to support decision-making.
3. EVALUATE financial performance using tools like rate of return, cost ratio, break-even analysis, depreciation methods, and tax regulations.
4. UNDERSTAND and INTERPRET accounting concepts, including balance sheets, income statements, cost accounting, and the impact of price changes using price indices.

Syllabus for B. Tech Admission Batch 2023-2027

Subject Name: Refrigeration & Air Conditioning

Credit: 3

Subject Code: PECME601A

Lecture Hours: 36

Pre-Requisites: Thermodynamics, Heat Transfer

Relevant Links: [Study Material](#)

NPTEL ([1](#))

Coursera ([1](#))

Course Objective:

- Objectives: 1. To familiarize with the terminology associated with refrigeration systems and air conditioning
2. To understand basic refrigeration processes
3. To understand the basics of psychrometry and practice of applied psychrometrics
4. To acquire the skills required to model, analyse and design different refrigeration as well as air conditioning processes and components

Course Content:

Module number	Topic	Sub-topics	Mapping with Industry and International Academia	Text Book & Chapter	Lecture Hours	Corresponding Lab Assignment
1	Introduction	Basic Definitions of Refrigeration and Air-Conditioning; History of Refrigeration; Natural and Artificial Refrigeration Methods; Techniques to produce low temperatures; Applications of Refrigeration; Refrigerants-Classification, Nomenclature, Desirable Properties, Selection.	<p>AICTE prescribed syllabus: https://www.aicte-india.org/sites/default/files/Model_Curriculum/Final_Mechanical%20Engg.pdf</p> <p>International Standard: ASHARE and ISHRAE Handbook</p> <p>Industry Mapping: Basics of Air Conditioning & Heat Load Calculation by L&T EduTech</p>	Refrigeration and Airconditioning, C P Aroa Chapter 1	02	Study of a Domestic Refrigerator.
2	Air Refrigeration	Air Refrigeration Cycles - reversed Carnot cycle; Bell-Coleman cycle analysis; various methods of Aircraft Refrigeration: Analysis, Merits and demerits.	<p>AICTE prescribed syllabus: https://www.aicte-india.org/sites/default/files/Model_Curriculum/Final_Mechanical%20Engg.pdf</p> <p>International Standard: ASHARE and ISHRAE Handbook</p> <p>Industry Mapping: Basics of Air Conditioning & Heat Load Calculation by L&T EduTech</p>	Refrigeration and Airconditioning, P L Ballaney, Chapter 2	02	Study of a room (window type) Air Conditioner.

3	Vapor Compression Refrigeration System	Ideal VCR cycle (Working, Analysis and Limitations); Standard VCRS (Working and Analysis); Methods to improve performance of VCR; Multi-Stage VCRS; Cascade Refrigeration.	<p>AICTE prescribed syllabus: https://www.aicte-india.org/sites/default/files/Model_Curriculum/Final_Mechanical%20Engg.pdf</p> <p>International Standard: ASHARE and ISHRAE Handbook</p> <p>Industry Mapping: Basics of Air Conditioning & Heat Load Calculation by L&T EduTech</p>	Refrigeration and Airconditioning, P L Ballaney, Chapter 3	06	Determination of C.O.P of a vapour compression refrigeration system.
4	Components of Refrigeration Systems	Compressors: Positive Displacement (Reciprocating and Rotary); Dynamic (Centrifugal and Axial) Compressors; Condensers and Evaporators (Both Natural and Forced Convection type); Expansion Devices and other components of the system.	<p>AICTE prescribed syllabus: https://www.aicte-india.org/sites/default/files/Model_Curriculum/Final_Mechanical%20Engg.pdf</p> <p>International Standard ASHARE and ISHRAE Handbook</p> <p>Industry Mapping: Basics of Air Conditioning & Heat Load Calculation by L&T EduTech</p>	A Text book of Refrigeration and Airconditioning, R S Khurmi and J K Gupta Chapter 15	04	Experiment in an Air Conditioning Test Unit; Determination of bypass factor and plotting of the cooling – dehumidification process on a psychometric chart.
5	Vapor Absorption Systems	Working and Analysis; Absorbent - Refrigerant combinations; Water Ammonia Systems;	<p>AICTE prescribed syllabus: https://www.aicte-india.org/sites/default/files/Model_Curriculum/Final_Mechanical%20Engg.pdf</p>	Refrigeration and Airconditioning, P L Ballaney, Chapter 20	04	

		Water-Lithium Bromide System; Modified Version of Aqua-Ammonia System with Rectifier and Analyzer Assembly.	gg.pdf International Standard ASHARE and ISHRAE Handbook Industry Mapping: Basics of Air Conditioning & Heat Load Calculation by L&T EduTech			
6	Other Refrigeration systems	Brief Discussion on (i) Steam-Jet refrigeration system; (ii) Vortex tube refrigeration; (iii) Thermoelectric refrigeration system; and (iv) Magnetic refrigeration.	AICTE prescribed syllabus: https://www.aicte-india.org/sites/default/files/Model_Curriculum/Final_Mechanical%20En gg.pdf International Standard ASHARE and ISHRAE Handbook Industry Mapping: Basics of Air Conditioning & Heat Load Calculation by L&T EduTech	Refrigeration and Airconditioning, P L Ballaney, Chapter 20	02	Performance test of thermoelectric refrigeration system.
7	Psychrometry	Classification of Air-Conditioning Systems; ASHRAE Nomenclature; Applications of Air-Conditioning; Psychrometry - Air-water vapor mixtures; Psychrometric Properties;	AICTE prescribed syllabus: https://www.aicte-india.org/sites/default/files/Model_Curriculum/Final_Mechanical%20En gg.pdf International Standard: ASHARE and ISHRAE Handbook Industry Mapping:	Refrigeration and Airconditioning, P L Ballaney, Chapter 20, 21	08	Assignment on CBE Thermal Comfort Tool

		Psychrometric or Air-Conditioning processes; Psychrometric Chart.	https://comfort.cbe.berkeley.edu/			
8	Air-Conditioning Systems	Classification of Air-Conditioning Systems; Psychrometry of Air Conditioning Systems; Thermal Comfort (Definition and Psychrometric Properties for Thermal Comfort); Mathematical Analysis of Air-Conditioning Systems; Cooling and Heating Load Estimation; a brief discussion on Ventilation.	<p>AICTE prescribed syllabus: https://www.aicte-india.org/sites/default/files/Model_Curriculum/Final_Mechanical%20Engg.pdf</p> <p>International Standard: ASHARE, ISHRAE Handbook, NBA 2016, ECBC 2017 and ENS 2018.</p> <p>Industry Mapping: Basics of Air Conditioning & Heat Load Calculation by L&T EduTech</p>	Refrigeration and Airconditioning, P L Ballaney, Chapter 22-26	12	Assignment on Heat load calculation and Air-Conditioning Systems sizing

Course Outcomes:

After completing this course, the students will

- CO1 Understand the working principles of refrigeration and air-conditioning systems.
- CO2 Design refrigeration systems that can produce low temperatures required in many industrial applications.
- CO3 Acquire enough knowledge to size the air conditioning systems for various application.
- CO4 Acquire expertise and develop confidence to design HVAC system.

Subject Name: Additive Manufacturing

Subject Code: PECME601B

Credit: 3

Lecture Hours: 3

Pre-Requisites: Manufacturing Process I, II

Relevant Links: [Study Material](#)

NPTTEL ([1](#), [2](#), [3](#))

Coursera ([1](#), [2](#), [3](#))

Objectives: To provide an overview of Additive Manufacturing processes, systems, and applications.

Course Content:

Module number	Topic	Sub-topics	Mapping with Industry and International Academia	Text Book & Chapter	Lecture Hours	Corresponding Lab Assignment
1	Introduction to Additive Manufacturing (AM):	Evolution of AM/3D printing; Comparison with subtractive and forming processes; Advantages of AM; Classification of AM processes; Key steps in AM.	AICTE prescribed syllabus: https://www.aicte-india.org/sites/default/files/MModel_Curriculum/Final_Mechanical%20Engg.pdf International Standard: Industry Mapping: AutoCAD, SolidWorks	Ian Gibson, David W Rosen, Brent Stucker, "Additive Manufacturing Technologies: 3D Printing, Rapid Prototyping and Direct Digital Manufacturing Chapter 1	4	Using SolidWorks, create a 3D model of a part and simulate the advantages of additive manufacturing (AM) compared to traditional subtractive and forming processes, highlighting key steps in the AM process.
2	CAD for Additive Manufacturing:	CAD Data formats, Data translation, Data loss, STL format	AICTE prescribed syllabus: https://www.aicte-india.org/sites/default/files/MModel_Curriculum/Final_Mechanical%20Engg.pdf International Standard:	Ian Gibson, David W Rosen, Brent Stucker, "Additive Manufacturing Technologies: 3D Printing, Rapid Prototyping and	3	In AutoCAD, convert a 3D model into STL format, explore data loss issues during translation, and demonstrate the

			Industry Mapping: AutoCAD, Ultimaker Cura	Direct Digital Manufacturing Chapter 2, 15, 17		process of preparing a model for 3D printing using AM.
3	Liquid State-based AM Processes:	Stereo lithography – Process and working principle; Photopolymers; Photo polymerization, layering technology, Laser and Laser scanning; Micro stereolithography; Equipment and specifications; Applications, advantages, disadvantages, examples; Solid ground curing: Process, Working principle; Equipment and specifications; Applications, advantages, disadvantages, examples.	AICTE prescribed syllabus: https://www.aicte-india.org/sites/default/files/M Model Curriculum/Final Mech anical%20Engg.pdf International Standard: Industry Mapping: ANSYS, SolidWorks, PrusaSlicer	Ian Gibson, David W Rosen, Brent Stucker, “Additive Manufacturing Technologies: 3D Printing, Rapid Prototyping and Direct Digital Manufacturing Chapter 1, 3, 4 3D Printing and Additive Manufacturing: Principles & Applications, Chua Chee Kai, Leong Kah Fai. Chapter 3	8	Use MATLAB to simulate the stereolithography process and solid ground curing, analyzing the working principles, equipment specifications, and potential applications and advantages of each method. Using PrusaSlicer, prepare models for FDM and LOM processes, compare the materials and equipment specifications, and discuss the advantages and disadvantages of each process.
4	Solid State-based AM Processes:	Fused Deposition Modeling – Process, working principle and materials; Equipment and specifications; Laminated object manufacturing – Process and working principle; Equipment and	AICTE prescribed syllabus: https://www.aicte-india.org/sites/default/files/M Model Curriculum/Final Mech anical%20Engg.pdf International Standard:	Ian Gibson, David W Rosen, Brent Stucker, “Additive Manufacturing Technologies: 3D Printing, Rapid Prototyping and Direct Digital	8	

		specifications; Applications, advantages, disadvantages, examples; Other solid-state processes – Ultrasonic consolidation, Gluing, Thermal bonding; Demonstration of equipment.	Industry Mapping: ANSYS, MATLAB, Ultimaker Cura	Manufacturing Chapter 3, 7, 10		
5	Powder Based AM Processes:	Powder Bed Fusion Processes – Working principle and materials; Powder fusion mechanism and powder handling; Various LBF processes (principle, materials, applications and examples) – Selective laser Sintering, Electron Beam Melting, Laser Engineered Net Shaping, Binder Jetting and Direct Metal Deposition; Comparison between LBF processes; Materials-process-structure-property relationships; relative advantages and limitations.	AICTE prescribed syllabus: https://www.aicte-india.org/sites/default/files/Model_Curriculum/Final_Mechanical%20Engg.pdf International Standard: Industry Mapping: <i>SolidWorks, 3D Sprint</i>	Ian Gibson, David W Rosen, Brent Stucker, “Additive Manufacturing Technologies: 3D Printing, Rapid Prototyping and Direct Digital Manufacturing Chapter 2, 3, 5, 10 3D Printing and Additive Manufacturing: Principles & Applications, Chua Chee Kai, Leong Kah Fai. Chapter 5	8	In SolidWorks, model parts suited for various Powder Bed Fusion (PBF) processes like Selective Laser Sintering (SLS) and Electron Beam Melting (EBM), and compare the material-process relationships, advantages, and limitations of each PBF technique. Design and Develop a AI-Driven 3D Printing Workflow for Automated Quality
6	Applications of AM:	Product development lifecycle applications – Rapid prototyping, ML	AICTE prescribed syllabus: https://www.aicte-india.org/sites/default/files/M	Ian Gibson, David W Rosen, Brent Stucker, “Additive	5	

		<p>based 3D printing Characterization, concept models, visualization aids, replacement parts, tooling, jigs and fixtures, moulds and casting; Application sectors – aerospace, automobile, medical, jewelry, sports, electronics, food, architecture, construction and others.</p>	<p>odel_Curriculum/Final_Mechanical%20Engg.pdf International Standard: Industry Mapping: MATLAB</p>	<p>Manufacturing Technologies: 3D Printing, Rapid Prototyping and Direct Digital Manufacturing Chapter 19 3D Printing and Additive Manufacturing: Principles & Applications, Chua Chee Kai, Leong Kah Fai. Chapter 7</p>		<p>Enhancement and Defect Detection.</p>

Course Outcomes:

At the end of this course students will demonstrate the ability to

1. Understand the overall principle and various processes for additive manufacturing.
2. Describe the CAD and data format for 3D printing purpose.
3. Select a particular additive manufacturing process based on the end application.
4. Plan the steps in fabricating a given part using additive manufacturing.

Subject Name: Turbo Machinery

Subject Code: PECME601C

Credit: 3

Lecture Hours:36

Pre-Requisites: Fluid Mechanics and Fluid Machinery

Relevant Links: [STUDY MATERIAL](#)

[NPTEL](#)

COURSE OBJECTIVES:

1. To know about the basic characteristics of compressible and incompressible flow machines.
2. To learn about deriving dimensionless numbers through dimensional analysis.
3. To know about the system of testing and performance analysis of turbo machines.

COURSE CONTENT:

Module number	Topic	Sub-topics	Textbook & Chapter No.	Mapping with Industry and International Academia	Lecture Hours	Corresponding Lab Assignment
1	Introduction	Classification: Incompressible and compressible flow machines; Radial, axial and mixed flow machines;	Mechanics of Fluids, B. Massey, Chapter - 13	<i>AICTE prescribed syllabus:</i> https://www.aicte-india.org/sites/default/files/Model_Curriculum/Final_Mechanical%20Engg.pdf	2	Make a simple model of a Pelton turbine's blade and design an appropriate fluid domain of the jet that flows out from the nozzle

		Turbines vs pumps, fans and compressors. Applications: Water supply, ventilation, power generation, propulsion		<p>International Standard: https://ocw.mit.edu/courses/2-25-advanced-fluid-mechanics-fall-2013/</p> <p>Industry Mapping: ANSYS</p> <p>AHEC/MNRE/SHP Standards/E & M Works entitled “Guidelines for Selection of Turbine and Governing System for Hydroelectric Projects</p>		to impinge the blade. Validate the flow velocity at the inlet and outlet using Continuity equation.
2	Incompressible-Flow Machines	Hydraulic Turbines: Headrace, penstock, nozzle, runner, draft tube and tail race; Gross head and net head; Velocity diagrams for impulse and reaction turbines; Discharge, head, power and efficiencies	Power Plant Engineering, P. K. Nag, Chapter – 10 Fluid Mechanics and Hydraulic Machines, R. K. Bansal, Chapter - 18	<p>AICTE prescribed syllabus: https://www.aicte-india.org/sites/default/files/Model_Curriculum/Final_Mechanical%20Engg.pdf</p> <p>International Standard: https://ocw.mit.edu/courses/2-25-advanced-fluid-mechanics-fall-2013/pages/syllabus/</p> <p>Industry Mapping: ANSYS</p> <p>AHEC/MNRE/SHP Standards/E & M Works entitled “Guidelines for Selection of Turbine and Governing System for Hydroelectric Projects</p>	8	Make a simple model of a Francis turbine’s blade. Identify the relation between changing area and fluid velocity through the casing using Continuity equation. Show the same in Workbench.
3	Pumps	Reservoir, foot valve,	Fluid	AICTE prescribed syllabus:	8	Create a working model of

		suction line, pump, delivery line and overhead tank; Static head and losses; Velocity diagrams; Discharge, head, power and efficiencies	Mechanics and Hydraulic Machines, R. K. Bansal, Chapters – 19 and 20	https://www.aicte-india.org/sites/default/files/Model_Curriculum/Final_Mechanical%20Engg.pdf International Standard: https://ocw.mit.edu/courses/2-000-how-and-why-machines-work-spring-2002/pages/study-materials/ Industry Mapping: ANSYS, MATLAB Fundamentals of external gear pump design, Logan T. Williams		a gear pump using MATLAB. Replicate the same using the same input parameters in ANSYS to compare the results obtained from the two approaches.
4	Compressible-Flow Machines	Static and stagnation states; Isentropic and adiabatic expansion and compression processes; Nozzle, diffuser and rows of stationary and moving blades; Efficiencies	Power Plant Engineering, P. K. Nag, Chapter – 7	AICTE prescribed syllabus: https://www.aicte-india.org/sites/default/files/Model_Curriculum/Final_Mechanical%20Engg.pdf International Standard: https://ocw.mit.edu/courses/16-01-unified-engineering-i-ii-iii-iv-fall-2005-spring-2006/pages/fluid-mechanics/ Industry Mapping: ANSYS	8	Make a simple model of a subsonic nozzle. Compare the flow of air and hydraulic oil (of your choice) through the nozzle. Note the difference in velocity at the exit of the nozzle to help visualize the effect of compressibility on flow.
5	Dimensional	Similarity laws, volume-	Fluid	AICTE prescribed syllabus:	4	Create a MATLAB script

	Analysis	flow, mass-flow head and power coefficients, pressure ratio, enthalpy ratio, Reynolds number, Mach number; Specific speed and machine selection	Mechanics and Hydraulic Machines, R. K. Bansal, Chapter - 12	https://www.aicte-india.org/sites/default/files/Model_Curriculum/Final_Mechanical%20Engg.pdf International Standard: https://ocw.mit.edu/courses/2-25-advanced-fluid-mechanics-fall-2013/pages/syllabus/ Industry Mapping: MATLAB		that calculates the dimensionless numbers (Reynold's number, Mach number, Weber number and Froude number) for the same input values. Create a plot in MATLAB to visualize the relationship between Reynold's number and fluid velocity.
6	Testing and Performance Analysis	Measurement devices; affinity laws and unit quantities. Set up and operating characteristics of pumps, turbines, fans and turbo-compressors. Cavitation— cause of cavitation and definition of Thoma's cavitation parameter, surge and choking	Mechanics of Fluids, B. Massey, Chapter - 13	AICTE prescribed syllabus: https://www.aicte-india.org/sites/default/files/Model_Curriculum/Final_Mechanical%20Engg.pdf International Standard: https://ocw.mit.edu/courses/2-016-hydrodynamics-13-012-fall-2005/pages/syllabus/ Industry Mapping: ANSYS	6	Create a condition in a simple 2D model (a rectangle, say) to ensure cavitation. Hint: Use Bernoulli's equation and its application in siphons to identify the required pressure.

COURSE OUTCOMES:

After completing this course, the students will

CO1: know basic characteristics of incompressible flow machines.

University of Engineering and Management
Institute of Engineering & Management, Salt Lake Campus
Institute of Engineering & Management, New Town Campus
University of Engineering & Management, Jaipur
Syllabus for B. Tech Admission Batch 2023-2027

CO2: know basic characteristics of compressible flow machines.

CO3: learn how to derive dimensionless numbers using dimensional analysis.

CO4: know about the method of testing and performance analysis of turbo machines.

Module	Topic	Sub-topics	Mapping with Industry and International Academia	Lecture Hours	Mapping with Text Book	Assignments
I	Chapter 1	Review of engineering materials and their properties, Definition and applications of composite materials, Fibres-glass, carbon, ceramic, and aramid fibres; Matrices-polymer, graphite, ceramic, and metal matrices; characteristics of fibres and matrices. Types of reinforcement and matrix; carbon and glass fibres; PMCs, MMCs, and CMCs; aligned fibre composites	<p>AICTE/National level prescribed syllabus: https://www.aicte-india.org/sites/default/files/Model_Curriculum/Final_Mechanical_Engg.pdf Composite Materials syllabus JU Material Engineering.pdf</p> <p>International Standard https://ocw.mit.edu/courses/3-40j-physical-metallurgy-fall-2009/pages/lecture-notes/ Industry Mapping: ANSYS/ MINITAB</p>	7	<p>Gibson R.F. Principles of Composite Material Mechanics, second edition, McGraw Hill, 1994. Chapter 1,</p> <p>W. D. Callister, 2006, "Materials Science and Engineering-An Introduction", 6th Edition, Wiley India, Chapter 16</p>	Design a Metal Matrix Composite for a high-performance aerospace application that requires a combination of high strength, low weight, and thermal stability. Discuss the selection of matrix material, reinforcement material, and manufacturing method, justifying your choices based on the specific needs of the application.

II	Chapter 2	Axial and transverse Young's moduli for an aligned long fibre composite; short fibre and particulate composites – stiffness behavior, Fracture strength of composites: axial tensile strength of long fibre composites, transverse and shear strength.	<p>AICTE/National level prescribed syllabus: https://makautexam.net/aicte_details/aicteugdetails.html Composite Materials syllabus JU Material Engineering.pdf</p> <p>International Standard https://ocw.mit.edu/courses/3-40j-physical-metallurgy-fall-2009/pages/lecture-notes/ Industry Mapping: ANSYS/ MINITAB</p>	8	<p>Gibson R.F. Principles of Composite Material Mechanics, second edition, McGraw Hill, 1994. Chapter 4,9,10.</p> <p>W. D. Callister, 2006, "Materials Science and Engineering-An Introduction", 6th Edition, Wiley India, Chapter 16</p>	Analyze how different fiber types and fiber orientations influence the axial tensile strength of long fiber composites. Discuss the role of the matrix material in the composite's overall tensile performance.
III	Chapter 3	Manufacturing of composite materials, bag moulding, compression moulding, pultrusion, filament winding, other manufacturing processes, demand, and future applications	<p>AICTE/National level prescribed syllabus: https://makautexam.net/aicte_details/aicteugdetails.html Composite Materials syllabus JU Material Engineering.pdf</p> <p>International Standard https://ocw.mit.edu/courses/3-40j-physical-metallurgy-fall-2009/pages/lecture-notes/ Industry Mapping: ANSYS/ MINITAB</p>	7	<p>Gibson R.F. Principles of Composite Material Mechanics, second edition, McGraw Hill, 1994. Chapter 1,</p> <p>W. D. Callister, 2006, "Materials Science and Engineering-An Introduction", 6th Edition, Wiley India,</p>	Analyze the factors that influence the quality of a composite part produced through compression molding. How do variables such as temperature, pressure, material properties, and mold design affect the final product's mechanical properties and surface finish?

					Chapter 16	
IV	Chapter 4	Fracture toughness of composites: energies absorbed by crack deflection and by fibre pull-out, crack deflection, toughness of different types of composite, constraints on matrix plasticity in MMCs, metal fibre reinforced ceramics. Compressive loading of fiber composites; thermal expansion of composites	<p>AICTE/National level prescribed syllabus: https://makautexam.net/aicte_detail/s/aicteugdetails.html Composite Materials syllabus JU Material Engineering.pdf</p> <p>International Standard https://ocw.mit.edu/courses/3-40j-physical-metallurgy-fall-2009/pages/lecture-notes/</p> <p>Industry Mapping: ANSYS/ MINITAB</p>	6	Gibson R.F. Principles of Composite Material Mechanics, second edition, McGraw Hill, 1994. Chapter 9,	Analyze how the fiber-matrix interface, fiber volume fraction, and fiber orientation affect the fracture toughness of composite materials. Discuss the role of toughening mechanisms in improving fracture resistance.
V	Chapter 5	Mechanical Testing of composites and their constituents: Measurement of Constituent material properties: Fiber test, Matrix test. Measurement of Basic Composite properties: Tensile tests, compressive tests, shear tests. Measurement of Visco Elastic and Dynamic Tests.	<p>AICTE/National level prescribed syllabus: https://makautexam.net/aicte_detail/s/aicteugdetails.html Composite Materials syllabus JU Material Engineering.pdf</p> <p>International Standard https://ocw.mit.edu/courses/3-40j-physical-metallurgy-fall-2009/pages/lecture-notes/</p> <p>Industry Mapping: ANSYS/ MINITAB</p>	8	Gibson R.F. Principles of Composite Material Mechanics, second edition, McGraw Hill, 1994. Chapter 10	Analyze the differences in mechanical properties such as tensile strength, compression strength, and shear strength of composite materials based on the type of testing performed.

Institute of Engineering & Management, Salt Lake Campus
Institute of Engineering & Management, New Town Campus
University of Engineering & Management, Jaipur
Syllabus for B. Tech Admission Batch 2023-2027

Course Outcomes:

1. Understand basics of composite materials and its use.
2. Understand basics of fiber and particulate composite.
3. Understand manufacturing processes of composite materials.
4. Understand the mechanical behavior of composites due to variation in temperature and moisture.

Text Books:

1. Gibson R.F. Principles of Composite Material Mechanics, second edition, McGraw Hill, 1994. (Chapter 1,4,9,10)
2. W. D. Callister, 2006, "Materials Science and Engineering-An Introduction", 6th Edition, Wiley India (Chapter 16)

Reference books:

1. Hyer M.W., Stress Analysis of Fiber- Reinforced Composite Materials, McGraw Hill, 1998.
2. 2.K.K. Chawla, Composite Materials- Science and Engineering, Springer International Publishing, 2019.
3. M. Mukhopadhyay, Mechanics of Composite Materials and Structures, University Press, 2013

Subject Name: Mechanical Engg Lab ID (Computer Aided Design and Analysis)

Subject Code: PCCME692

Credit: 1

Lecture Hours: 24

Pre-requisite: Computer Aided Design and Analysis

Course Objectives:

- Develop proficiency in 2D and 3D geometric modeling and apply various transformations (translation, scaling, rotation) to shapes.
- Utilize solid modeling techniques to create complex 3D objects and conduct basic finite element analyses to simulate structural behavior.

Course Contents (experiments/ problems/ studies are to perform):

Topic	Mapping with Industry and International Academia	Corresponding Lab Assignment
1. Develop MATLAB code to implement 2D transformation matrices for translation, scaling, and rotation. Apply these matrices to a given set of points and graphically display both the original and transformed shapes 2. Generate equation driven curves in SolidWorks and implement them in designing machine elements e.g. sinusoidal or parabolic profile cams. 3. Generate a smooth trajectory of a robotic arm motion with a cubic Bezier curve with pre-defined control points. Visualize this trajectory in a MATLAB-	AICTE prescribed syllabus: https://www.aicte-india.org/sites/default/files/Model_Curriculum/Final_Mechanical%20Engg.pdf International Standards: https://ocw.mit.edu/c	1. Implement MATLAB for 2D transformation matrices on translation, scaling, and rotation. Apply these matrices to a specified set of points and visually represent both the original and transformed shapes. 2. Generate equation driven curves in SolidWorks and implement them in designing machine elements e.g. sinusoidal or parabolic profile cams. 3. Implement a MATLAB SIMULINK model to simulate the motion of a robotic arm along a smooth path using a cubic Bezier curve, where the

<p>SIMULINK environment and compare it with a linear path</p> <ol style="list-style-type: none"> Utilize solid modeling techniques to create a 3D object in SolidWorks. Save the model and export it in a commonly accepted file format like IGES or STL and import to a CAE tool. Conduct a one-dimensional finite element analysis (FEA) using ANSYS to simulate the stress and deformation of a bar element subjected to a specified load. Utilize post-processing capabilities to visually represent the results and compare them with theoretical predictions based on classical mechanics Determine the theoretical stress-concentration factor (K_t) for a notched specimen using ANSYS Mechanical. Create a simple 2D frame model in STAAD.Pro, apply loads and boundary conditions, and analyze the internal forces (axial, shear, bending) using post-processing tools. 	<p>ourses/2-008-design-and-manufacturing-ii-spring-2003/pages/labs/</p> <p>Industry Mapping: AUTOCAD, SOLIDWORKS, ANSYS, MATLAB-SIMULINK, STAAD Pro</p>	<p>arm moves between two specified coordinates with the help of pre-defined control points. Visualize the trajectory in the Scope block and compare the smooth motion provided by the cubic Bezier curve to a linear path.</p> <ol style="list-style-type: none"> Utilize solid modeling techniques to create a 3D object in SolidWorks. Save the model and export it in a commonly accepted file format like IGES or STL and import to a CAE tool. Learn the postprocessing technique and analyse the dynamic result obtained. Determine the theoretical stress-concentration factor (K_t) for a notched specimen using ANSYS Mechanical.
--	--	---

Course Outcomes:

After completing this course,

- Demonstrate proficiency in using CAD software to create and manipulate 2D and 3D geometric shapes.
- Apply mathematical concepts to implement 2D transformations and understand their effects on shapes.
- Utilize solid modeling techniques to create complex 3D objects and understand their manufacturing implications.
- Apply FEA principles to analyze the stress and deformation of simple structures and interpret the results.

Subject Name: Mechanical Engineering Laboratory IIID (Refrigeration and Air Conditioning)

Subject Code: PCCME693

Credit: 1

Lecture Hours: 24

Pre-Requisites: Heat transfer

Course Content:

S. No.	Topic	Mapping with Industry and International Academia	Corresponding Lab Assignment
1	Analyzing different components of a domestic refrigerator and enhancing the efficiency through simulation.	<u>AICTE prescribed syllabus:</u> https://www.aicte-india.org/sites/default/files/Model_Curriculum/Final_Mechanical%20Engg.pdf	Create a MATLAB Simulink model of the various parts of a simple domestic refrigerator (compressor, condenser, expansion valve and evaporator).
2	Evaluate the C.O.P. and air-conditioning capacity of a window-type-air conditioner via thermodynamic data collection from different sensors and analyzing the same through plotting $p-h$ and $T-s$ diagrams at different ambient conditions on a psychrometric chart of R-22.	<u>International Standards:</u> https://ocw.mit.edu/courses/4-42j-fundamentals-of-energy-in-buildings-fall-2010/pages/readings/	Create a MATLAB Simulink model of an air conditioning system (compressor, condenser, expansion valve, evaporator, thermostat control unit and power meter), define the system parameters (room temperature, ambient temperature, compressor power, thermostat set points), run the simulation for 2 hours and observe the fluctuation of room temperature.
3	Evaluate the C.O.P. of a vapour compression refrigeration system based on the thermodynamic data collected from the setup (based on LabVIEW software) and analyzing the same through plotting the $p-h$ diagram on a psychrometric chart of R-134a. Also, comparing the theoretical and actual results.	<u>Industry Mapping:</u> MATLAB, ANSYS	For a CAD model of a VCRS, define the boundary conditions of the system in ANSYS, consider refrigerant R-22 as the fluid and check the heat flow along the system for a 2-hour simulation. Calculate the C.O.P. of the system based on the generated results.
4	Evaluate the C.O.P. of a centralized-air conditioner		For the MATLAB Simulink model of a VCRS, use

	(setup – based on LabVIEW software) via thermodynamic data collection from different sensors and analyzing the same through plotting $p-h$ and $T-s$ diagrams on a psychrometric chart of R-134a. Also, comparing the theoretical and actual results.	Basics of Air Conditioning & Heat Load Calculation by L&T EduTech NBA 2016, ECBC 2017 and ENS 2018	psychrometric.m (from MATLAB File Exchange) to track the change in air properties (such as dry bulb temperature, wet bulb temperature, relative humidity, and enthalpy) as the air moves through the evaporator and condenser. Calculation of heat load of a room through real-life data collection using simulation tool.
5	Performance analysis of a thermoelectric refrigeration system and its correlation with thermodynamic cycle to understand the Peltier effect and calculating the effectiveness of the semi-conductor diode of the setup.		Make a 2D geometry of a block of ice (at -10°C) surrounded by ambient air and assess the flow of heat with respect to time. Tabulate the transient results.
Mini Project: Create a MATLAB script titled “refrigerationCycleSimulator.m” that simulates the performance of a VCRS that uses input parameters like refrigerant type, compressor efficiency, condenser and evaporator temperatures, and the script calculates important thermodynamic properties (enthalpy, pressure, entropy, etc.) at various points in the cycle. The tool should also help visualize the cycle on a $T-s$ diagram and $P-h$ diagram.			

Course outcomes:

- CO1:** Understand the basic operating principles and working of a refrigeration system’s components.
- CO2:** Analyze the operation and performance of refrigeration systems.
- CO3:** Evaluate the performance characteristics and energy efficiency of air conditioning systems.
- CO4:** Investigate the psychrometric behavior of air conditioning systems.

Subject Name: Project-IV (Minor)

Subject Code: PROJME682

Credit: 1

Lecture Hours: 24

Pre-Requisites: No pre-requisites

Course Objectives:

This course is aimed to provide more weightage for project work. The project work could be done in the form of a summer project or internship in the industry or even a minor practical project in the college. Participation in any technical event/ competition to fabricate and demonstrate an innovative machine or product could be encouraged under this course.

Course Outcomes:

Students will be able to understand

1. Background work related to project idea.
2. the procedure to carry out practical projects related to any technical event
3. fabrication process of a product
4. demonstrate an innovative machine or product, etc.

Subject Name: Essential Studies for Professionals (ME)-VI	Semester: 6th
L-T-P : 2-0-0 (Total Contact Hrs. 2)	Credit: 2
Pre-Requisites: Thermodynamics, Fluid Mechanics, Strength of Material	

Course Objective:

1. To learn about modes of heat transfer and related laws for professional exams
2. To learn about fundamentals of fluid mechanics for various exams
3. To learn about basic of Structure and properties of mechanics of materials for professional exams
4. To learn about fundamentals of Hydraulics for various exams

Course Outcomes:

At the end of the course the students will be able-

1. To develop an understanding of heat transfer correlations and their laws and factors.
2. To apply the knowledge of turbo machinery.
3. To understand fluid statistics and fluid properties.
4. To learn and understand the Structure and properties of Hydraulic machines.

Course Content:

Module No.	Description	Hour	BloomsLevel	PO (1.1.2) Mapping
1.	Heat-Transfer: Modes of heat transfer; one dimensional heat conduction, resistance concept and electrical analogy, heat transfer through fins; unsteady heat conduction, lumped parameter system, Heisler's charts; thermal boundary layer, dimensionless parameters in free and forced convective heat transfer, heat transfer correlations for flow over flat plates and through pipes, effect of turbulence; heat exchanger performance, LMTD and NTU methods; radiative heat transfer, Stefan-Boltzmann law, Wien's displacement law, black and grey surfaces, view factors, radiation network analysis	12	L1 (Remember) L2 (Understand) L4 (Analyze)	PO1, PO2, PO3
2.	Application: Turbomachinery: Impulse and reaction principles, velocity diagrams, Pelton-wheel, Francis and Kaplan turbine Fluid Mechanics: Fluid properties; fluid statics, manometry Mechanics of Materials: Stress and strain, elastic constants, Poisson's ratio; Mohr's circle for plane stress and plane strain; thin cylinders; shear force and bending moment diagrams; bending and shear stresses; deflection of beams; torsion of circular shafts; Euler's theory of columns; energy methods; thermal stresses; strain gauges and rosettes; testing of materials with universal testing machine; testing of hardness and impact strength	12	L1 (Remember) L2 (Understand) L3 (Apply) L4 (Analyze)	PO1, PO2, PO3
3.	Fluid Mechanics: Properties of fluids, fluid statics; Continuity, momentum, energy and corresponding equations; Potential flow, applications of momentum and energy equations; Laminar and turbulent flow; Flow in pipes, pipe networks; Concept of boundary layer and its growth. Hydraulics: Forces on immersed bodies; Flow measurement in	12	L1 (Remember) L2 (Understand) L3 (Apply) L4 (Analyze)	PO1, PO2, PO3

Syllabus for B. Tech Admission Batch 2023-2027

Minor Degree in Sustainable Energy Engineering (SEE)- IEM_UEM

Electronics for Renewables

Course Code	MINOR601S
Course Title	Electronics for Renewables
Number of credits	03(L:1;P:2;S:1)
Course category	SEE
Pre-requisites	Basic Electronics, Energy resources

Course Objective:

This course will offer

- An understanding of basic components used in electronics application in renewable energy
- Operation of rectifiers
- Description and design of DC to DC convertors and their role in renewable energy technologies
- Description and design of DC to AC convertors and their role in renewable energy technologies
- Understanding and functionality of simple, PWM and MPPT charge controllers, their input and output parameters
- Understanding and functionality of off-grid, grid-tied and hybrid solar inverters
- Details of the efficient solar products available commercially for domestic and commercial application

Course Content

A. Theoretical Learning

Lecture No.	Contents
1	Electronic components-1: Components of electronic circuits used in renewable energy like diode, MOSFETs, IGBTs, etc. their functionalities and I-V characteristics
2	Electronic components-2: Components of electronic circuits used in renewable energy like diode, MOSFETs, IGBTs, etc. their functionalities and I-V characteristics
3	Rectifier: Half bridge and full-bridge converters, Power circuit and steady state analysis
4	DC – DC controller -1: Need of DC-DC conversion in renewable energy technologies, basics of DC-DC conversion, design of circuits, input and output parameters
5	DC – DC controller -2: Need of DC-DC conversion in renewable energy technologies, basics of DC-DC conversion, design of circuits, input and output parameters
6	DC – AC conversion-1: Need of DC-AC conversion in renewable energy technologies, basics of DC-AC conversion, design of circuits, input and output parameters
7	DC – AC conversion-2: Need of DC-AC conversion in renewable energy technologies, basics of DC-AC conversion, design of circuits, input and output parameters
8	Application of DC-DC controllers to solar energy-1: functionality and design of simple charge controller, input and output parameters
9	Application of DC-DC controllers to solar energy-2: functionality and design of PWM charge controller, input and output parameters

10	Application of DC-DC controllers to solar energy-3: functionality and design of MPPT charge controller
11	Application of DC-AC inverter to solar energy-1: functionality and design of off-grid inverter, input and output parameters
12	Application of DC-AC inverter to solar energy-2: functionality and design of grid-connected inverter, input and output parameters
13	Application of DC-AC inverter to solar energy-3: functionality and design of hybrid inverter, input and output parameters
14	Efficient solar operated products-1: Solar based DC products for domestic and industrial appliances
15	Efficient solar operated products-2: Solar based DC products for domestic and industrial appliances

B. Practical Learning

In contents please provide as detailed titled of the experiments as possible, also break down experiments in sub experiments to give clear indication on what are the concepts/observations students are expected to learn in each experiments

Experiment No.	Contents
1	Learn to make a PCB, design of PCB, fabrication of PCB
2	Experiment with an Half Bridge & Full bridge rectifiers & observe their characterisation, note down input and output parameters
3	Various firing circuits for IGBTs & their characterisation
4	Open up a hybrid / MPPT solar inverter, look at each and every block inside the inverter, write down the function of each block and match it with the theory that you have learned, note down the input and output parameters, using oscilloscope observe the shape of output waveform
5	Make a PCB with DC-DC conversion ICs and create a DC-DC converter

6	Make a simple inverter on a PCB, observe the input and output parameters, observe the output waveform shape
---	---

C. Social Learning

This activity would be most crucial and needs careful design. This includes activities outside the classroom and outside the laboratory. Students must do something to apply their knowledge. This can also be exercise to apply the knowledge learned in classroom and laboratory and gather more information/data from society on a topic.

Social experiment No.	Contents
1	Use the DC-DC charge controller that you have made and installed it for someone or some shop (like Paan shop, or any other shop) as device for their mobile charging. Make a brief report on it, possibly with photo of installation and small interview.
2	Use DC-DC charge controller that you have made, couple it with battery and solar panel to run a 2 W LED light, install the light at someone's place who may need such light e.g. vegetable / fruit vendor, a hut, etc. Make a brief report on it possibly with photo of installation and small interview.
3	Based on your understanding of electronics used for solar energy applications, give one or two talks to junior classes or in a school
4	Visit a solar system installation in institution or any other location, small or big, observe the electronics used in the installation, prepare a report on it.

Expected outcome of course:

- Ability to understand the role of various electronic components in renewable energy technologies
- Ability to theoretically design DC to DC and DC to AC converters
- Ability to describe various charge controller and inverters used in solar energy technologies
- Ability to understand various solar DC efficient products available in the market
- Ability to fabricate simple DC to DC converters using ICs and deploy in the field

Syllabus for B. Tech Admission Batch 2023-2027

Course Code	:	MINOR601A
Course Title	:	Special topics in Artificial Intelligence
Number of Credits	:	3 (L: 3; T: 0; P: 0)
Semester	:	6 th Semester

Course Objective: To give fundamental knowledge to the students so that they can understand what the AI is and study important topics related to the field.

Course Contents: [Total Theory Duration: 42 Lectures]

Module 1: [Duration: 9 Lectures]

Bayesian Filtering; Recurrent Neural Networks, Deep Neural Networks, Deep Reinforcement Learning.

Module 2: [Duration: 7 Lectures]

Self-Play Networks, Generative Adversarial Networks, Learning from Concept-Drifting Data Streams.

Module 3: [Duration: 9 Lectures]

Audio Signal Processing Basics, mirtoolbox contains many useful audio processing library functions, VOICEBOX: Speech Processing Toolbox for MATLAB, Audio processing in Matlab.

Module 4: [Duration: 10 Lectures]

Architectures for second generation knowledge based systems, Distributed AI and its applications.

Module 5: [Duration: 7 Lectures]

An introduction to neurocomputing and its possible role in AI, The role of uncertainty measures and principles in AI.

2. Artificial Intelligence & Soft Computing for Beginners, 3rd Edition-2018, by Anindita Das, Shroff Publisher Publisher.
3. Artificial Intelligence: A Modern Approach, 3rd Edition, by Stuart Russell and Peter Norvig, Pearson Publisher.
4. New Artificial Intelligence (Advanced), Takashi Maeda and Fumio Aoki, Ohmsha Publisher.

Course Outcomes: After completion of course, students would be able:

1. To understand various AI techniques.
2. To decide when to use which type of AI technique.

Course Code: MINOR601R

Course Title: Control of Robotic Systems

Credits: 3 (L: 3; T: 0; P: 0)

Course Category: MINOR

Course Objective

This course aims to develop the understanding of control systems, its designing and application.

Course Contents

Module 1: Basics of Control

Differential Equation, Transfer function, Frequency response, Routh-Hurwitz test, relative stability, Root locus design, construction of root loci, Phase lead and phase-lag design, lag-lead design, Bode, polar, Nyquist plot

Module 2: Linear Control

Concept of states, state space model, different form, Controllability, observability, Pole placement by state feedback, observer design, P, PI & PID Controller, Control law partitioning, Modelling and control of a single joint

Module 3: Non-Linear Control System

Common physical non-linear system, Phase plane method, system analysis by phase plane method, Stability of non-linear system, Stability analysis by describing function method, Liapunov's stability criterion, The control problems for manipulators

Module 4: Motion Control

Point to Point Control, trajectory generation, Continuous Path Control, Joint based control, Cartesian Control, Force Control, hybrid position/force control system

Alternative SWAYAM/NPTEL Course

NPTEL Course Name	Instructor	Host Institute
Robotics and Control: Theory and Practice	Prof. N. Sukavanam, Prof. M. Felix Orlando	IIT Roorkee
Control systems	Prof. C. S. Shankar Ram	IIT Madras

Course Outcomes (COs)

After successful completion of this course, students will be able to:

CO1: Analyze and model dynamic systems using differential equations, transfer functions, and state-space representations.

CO2: Design and evaluate classical and state-space control strategies, including P, PI, PID controllers and state feedback/observer systems.

CO3: Examine stability and behavior of non-linear systems using phase-plane analysis, Lyapunov methods, and describing functions.

CO4: Apply motion control techniques for robotic manipulators including trajectory planning, joint-space and Cartesian control, and hybrid position/force control.
